EDUCATION

B.E. Artificial Intelligence, Jiangnan University, Wuhan, China, 2020-present
advisor: [Associate Researcher Zhongyuan Lai](#)

RESEARCH EXPERIENCE

Institute for Interdisciplinary Research, Jiangnan University

Wuhan, China

Undergraduate Researcher

Sep 2020 – present

Under the supervision of [Associate Researcher Zhongyuan Lai](#), I proposed a point cloud classification framework that can extract more effective global features with better robustness than existing point cloud classification models. The work was submitted to Computers Electrical Engineering (CAEE) and accepted, and I am the first author of the publication. Now I am combining GAN and Transformer together to propose a stable point cloud completion model, which is still able to complete the point cloud well in the extreme case of there are only 16 points of partial point clouds. This work collaborate with University at Buffalo, State University of New York [Professor Junsong Yuan](#) is submit to ICCV23'. A Chinese national invention patent is being accepted. Seven software copyright applications have been registered by the National Copyright Administration. six of them have been transformed with a total of RMB 90,000.

School of Cyber Science and Engineering, Wuhan University

Wuhan, China

Intern

Jun 2022 – Dec 2022

Learn reinforcement learning, Federated Learning, adversarial learning and other ai safety knowledge under the guidance of [Professor Libing Wu](#). Based on the current high communication overhead and vulnerability of edge devices with servers, a federation learning algorithm was designed to address the communication efficiency while ensuring robustness against Byzantine attacks, and the work has been submitted to IEEE Network, and I have also co-authored with Libing Wu's team Security and Communication Networks, BESC'22, and Information.

Institute of Data Science, The University of Hong Kong

Pokfulam, Hong Kong

Remote Intern

Nov 2022 – present

Learn about the application of Federated Learning in AI in healthcare and participate in several projects exploring privacy leakage attack in Federated Learning under the guidance of [Assistant Professor Liangqiong Qu](#). I studied the privacy leakage problem under different federated learning algorithms in the framework of federated learning for smart healthcare under different attacks, and found that the privacy leakage attack method designed based on GAN networks can still reconstruct the input image while the federated learning shared information is protected, but there is a problem with the discrepancy under the same class due to the problem of a priori knowledge of the reconstructed class, resulting in the reconstructed However, due to the problem of discrepancy under the same class with the help of the prior knowledge of the reconstructed class, the reconstructed input image is not the same as the recovered one. Federal learning communication is also being investigated to reduce the overhead by means of model compression.

School of Information Sciences, University of Illinois Urbana-Champaign

IL, USA

Remote Intern

Dec 2022 – present

Under the guidance of [Assistant Professor Haohan Wang](#), I am working on theoretical machine learning and am currently investigating whether adding data-free knowledge distillation to federal learning can protect customer privacy better than existing methods.

RESEARCH AREAS

Computer Vision: 3D reconstruction, point cloud recognition, completion

Deep Learning

Machine Learning

AWARDS

Awards and Honors

- 2022 Second Prize in Hubei Contest District in China Undergraduate Mathematical Contest in Modeling
- 2022 ASC World Student Supercomputer Competition Second Prize
- 2021 Jiangnan University Third Class Scholarship

EXTERNAL AND INTERNAL FUNDING

A. MODERATOR

- 1 An Encoder-Decoder network-based point cloud completion method

The second batch of student research projects in 2021 of Jiangnan University (No. 2021Bczd006)
2021/10-2022/10 RMB 5000

B. Participation

- 1 Machine vision-based recognition of abnormal human postures and rehabilitation movements
Key Research and Development program projects of Hubei Province (No. 2020BCB054)
2020/09-2022/07: RMB 1 million
- 2 Research on the Detection Method of Weakly Perceived Point Cloud Targets in Complex Scenes
National Natural Science Foundation of China (No. 62106086)
2021-present: RMB 200,000
- 3 Machine vision-based blast rock detection and trajectory prediction
State Key Laboratory of Precision Blasting 2022 Exploratory Project of Independent Subjects
(No. PBSKL2022201)
2022/05-2024/05: RMB 200,000
- 4 Research on weak perceptual target detection method based on deep attention-guided completion
Nature Science Foundation of Hubei Province (No. 2021CFB564)
2021-present: RMB 80,000
- 5 Machine vision-based assessment of infant motor development
Jiangnan University School-level Research Project (No. 2022SXZX16)
2022/11-2024/11: RMB 70,000

TEACHING

2021 Teaching Assistant: Object Oriented Programming (C++)

SERVICE

Academic Journal and Conference Reviewer

Computers and Electrical Engineering (CAEE)

International Symposium on Artificial Intelligence and Robotics (ISAIR)

Membership in Professional Societies

China Society of Image and Graphics (CSIG) Student Member

SKILLS

Programming Python, C/C++, Java, LaTeX, Matlab, R

Deep Learning PyTorch, TensorFlow
